

PDMWorks Enterprise

PRODUCT DATA MANAGEMENT SOFTWARE SOLUTION FOR THE ENTERPRISE

PDMWorks® Enterprise is a product data management (PDM) software solution that can be deployed in a fraction of the time required by other enterprise PDM systems. It helps your organization manage and share product data more effectively to create better products in less time.

PDMWorks Enterprise software simplifies the process of managing product design changes for distributed design teams.

The software's interface is intuitive, providing unmatched integration with Windows Explorer.

Effective teamwork is vital to delivering the right product at the right time and price to meet the needs of your customers. PDMWorks Enterprise is a PDM solution that enables members of your organization to work together more easily and bring quality products to market more rapidly.

Improve information sharing and implement rapidly across multiple sites

With PDMWorks Enterprise software, your organization can better manage and share all types of product information and data, from engineering documents to product marketing specifications. By improving data management and workflow across multiple sites, PDMWorks Enterprise helps integrate the product development activities of widely dispersed corporate divisions, departments, customers, and suppliers.

The capabilities of PDMWorks Enterprise are well proven in a variety of industries, including mechanical machinery, electronics, medical, and power and process. PDMWorks Enterprise simplifies product changes and information sharing, as well as providing access via the web and the ability to integrate with other enterprise systems. The software's interface is highly intuitive, offering unmatched integration with Windows® Explorer. PDMWorks Enterprise is also cost-effective and can be implemented in a fraction of the time required by other solutions in its class.

Increase efficiency with best-in-class data management capabilities

Improve the product development process through easy access to the most up-to-date versions of all documents and data. Effective data management allows engineering, manufacturing, purchasing, and marketing staff to avoid errors such as working with the wrong versions of documents or accidentally overwriting the right versions. In addition, PDMWorks Enterprise enables easier reuse of data, conserving time and effort. For example, it lets product designers locate CAD files quickly with "where used" and attribute searches.

Streamline processes with workflow automation

The workflow capabilities of PDMWorks Enterprise software allow your organization to automate approval processes to reduce errors and improve efficiency. For example, you can eliminate many bottlenecks by automating the process of releasing product designs for manufacture and making subsequent design changes such as generating engineering change orders (ECOs). Unlike other enterprise PDM systems, PDMWorks Enterprise allows you to change workflow easily, so your organization can adapt quickly to changes.

Audit activities to improve standards compliance and quality

PDMWorks Enterprise tracks and records every event, each workflow, and at every version. Audit tools record who did what and when, and how and why each change was made, simplifying preparation of internal quality reports as well as those required by regulatory agencies and ISO auditors. Auditing activities more effectively can help to identify potential problems early and improve processes continuously, increasing your organization's ability to compete.

Share information with your customers and suppliers

With PDMWorks Enterprise you can extend the benefits of data management and workflow capabilities to activities involving customers and suppliers. PDMWorks Enterprise lets you provide exactly the right level of information access to each member of your extended team, improving efficiency without compromising confidentiality or security. Extending product information to customers and suppliers with PDMWorks Enterprise shortens the product development process.

The workflow capabilities of PDMWorks Enterprise allow your organization to fully automate engineering processes to reduce errors and improve efficiency.
